| The goal of science is to understand the natural world. Students must learn to use scientific practices and accumulated knowledge to better understand the world around them. Within the natural world, complex relationships exist between living and non-living parts in an ecosystem. Ecosystems are disrupted when their physical environment changes or when non-native species are introduced. | • Why are the relationships among the parts of an ecosystem so complex?  
• How are ecosystems affected by physical changes in the environment?  
• How do living and non-living parts of an ecosystem interact?  
• How are ecosystems affected by the introduction of non-native species?  
• How can collected data provide evidence to support or refute a hypothesis? | Abiotic carrying capacity  
Biotic limiting factors  
Species predator  
Population prey  
Niche ecology  
Ecosystem trade-offs  
Consumer habitat  
Producer kingdom  
Decomposer phylum  
Food Chain mussel  
Food Web owl pellet  
Invasive species photosynthesis  
Non-native species |

### 2004 AZ Standards

#### Highly-Leveraged Standards

**Strand 4: Life Science (HLS – 14%)**  
**PO1.** Compare food chains in a specified ecosystem and their corresponding food web.  
**PO2.** Explain how organisms obtain and use resources to develop and thrive in:  
• Niches  
• Predator/prey relationships  
**PO3.** Analyze the interactions of living organisms with their ecosystems:  
• Limiting factors  
• Carrying capacity  
**PO4.** Evaluate data related to problems associated with population growth (e.g., overgrazing, forest management, invasion of non-native species) and the possible solutions.  
**PO5.** Predict how environmental factors (e.g., floods, droughts, temperature changes) affect survival rates in living organisms.

#### Supporting Standards

**Strand 3: Science in Personal and Social Perspectives**  
7.S3.C1 Changes in Environment: Describe the interactions between human populations, natural hazards, and the environment.  
**PO1.** Analyze environmental risks (e.g., pollution, destruction of habitat) caused by human interaction with biological or geological systems.  
**PO2.** Analyze environmental benefits of the following human interactions with biological or geological systems:  
• Reforestation  
• Habitat restoration  
• Construction of dams  
**PO3.** Propose possible solutions to address the environmental risks in biological and geological systems.  
**7.S3.C2 Science and Technology in Society:** Develop viable solutions to a need or problem.  
**PO1.** Propose viable methods of responding to an identified need or problem.
<table>
<thead>
<tr>
<th><strong>PO6.</strong> Create a model of the interactions of living organisms within an ecosystem.</th>
<th><strong>PO2.</strong> Compare possible solutions to best address an identified need or problem. <strong>PO3.</strong> Design and construct a solution to an identified need or problem using simple classroom materials.</th>
</tr>
</thead>
</table>

### Constant Standards

**Strand 1: Inquiry Process (HLS – 35%)**

#### 7.S1.C1 Observations, Questions, and Hypotheses: Formulate predictions, questions, or hypotheses based on observations.

- **PO1.** Formulate questions based on observations that lead to the development of a hypothesis.
- **PO2.** Select appropriate resources for background information related to a question, for use in the design of a controlled investigation.
- **PO3.** Explain the role of a hypothesis in a scientific inquiry.

- **PO1.** Demonstrate safe behavior and appropriate procedures (e.g., use and care of technology, materials, organisms) in all science inquiry.
- **PO2.** Design an investigation to test individual variables using scientific processes.
- **PO3.** Conduct a controlled investigation, utilizing multiple traits, to test a hypothesis using scientific processes.
- **PO4.** Perform measurements using appropriate scientific tools (e.g., balances, microscopes, probes, micrometers).
- **PO5.** Keep a record of observations, notes, sketches, questions, and ideas using tools such as written and/or computer logs.

#### 7.S1.C3 Analysis and Conclusions: Analyze and interpret data to explain correlations and results; formulate new questions.

- **PO1.** Analyze data obtained in a scientific investigation to identify trends.
- **PO2.** Form a logical argument about a correlation between variables or sequence of events (e.g., construct a cause-and-effect chain that explains a sequence of events).
- **PO3.** Analyze results of data collection in order to accept or reject the hypothesis.
- **PO4.** Determine validity and reliability of results of an investigation.
- **PO5.** Formulate a conclusion based on data analysis.
- **PO6.** Refine hypotheses based on results from investigations.
- **PO7.** Formulate new questions based on the results of a previous investigation.

#### 7.S1.C4 Communication: Communicate Results of Investigations.

- **PO1.** Choose an appropriate graphic representation for collected data:
  - Line graph
  - Double bar graph
  - Stem and leaf plot
  - Histogram
PO2. Display data collected from a controlled investigation.
PO3. Communicate the results of an investigation with appropriate use of qualitative and quantitative information.
PO4. Write clear, step-by-step instructions for following procedures (without the use of personal pronouns).
PO5. Communicate the results and conclusion of the investigation.

Strand 2: History and Nature of Science
7.S2.C1 History of Science as a Human Endeavor: Identify individual, cultural and technological contributions to scientific knowledge.
PO1. Identify how diverse people and/or cultures, past and present, have made important contributions to scientific innovations (e.g., Rachel Carson [scientist], supports Strand 4; Luis Alvarez [scientist] and Walter Alvarez [scientist], supports Strand 6; Percival Lowell [scientist], supports Strand 6; Copernicus [scientist], supports Strand 6).
PO2. Describe how a major milestone in science or technology has revolutionized the thinking of the time (e.g., global positioning system, telescopes, seismographs, photography).
PO3. Analyze the impact of a major scientific development occurring within the past decade.
PO4. Analyze the use of technology in science-related careers.

7.S2.C2 Nature of Scientific Knowledge: Understand how science is a process for generating knowledge.
PO1. Describe how science is an ongoing process that changes in response to new information and discoveries.
PO2. Describe how scientific knowledge is subjected to change as a new information and/or technology challenges prevailing theories.
PO3. Apply the following scientific processes to other problem solving or decision making situations:
- Observing
- Questioning
- Communicating
- Comparing
- Measuring
- Classifying
- Predicting
- Organizing data
- Inferring
- Generating hypotheses
- Identifying variables

Strand 3: Science in Personal and Social Perspectives
7.S3.C2 Science and Technology in Society: Develop viable solutions to a need or problem.
PO4. Describe a scientific discovery that influences technology.

## 2019-2020 Science Curriculum Map, Grade 7

Use mathematics and computational thinking
Construct explanations and design solutions
Engage in argument from evidence
Obtain, evaluate, and communicate information

### Social Justice Standards

**Identity 3** – I know that overlapping identities combine to make me who I am and that none of my group identities on their own fully defines me or any other person. (ID.6-8.3)

**Diversity 6** – I interact with people who are similar to and different from me, and I show respect to all people. (DI.6-8.6)

**Diversity 9** – I know I am connected to other people and can relate to them even when we are different or when we disagree. (DI.6-8.9)

**Justice 12** – I can recognize and describe unfairness and injustice in many forms including attitudes, speech, behaviors, practices and laws. (JU.6-8.12)

**Action 18** – I can respectfully tell someone when his or her words or actions are biased or hurtful. (AC.6-8.18)

**Teaching Tolerance Anti-Bias Framework** [https://www.tolerance.org/frameworks](https://www.tolerance.org/frameworks)

### Adopted Texts and Materials

**Textbook:**
- TUSD Science Center Ecology module
- SEPUP Ecology materials
- Science Module Supplemental Resources: [http://curriculum.tusd1.org/Subject-Areas/Science/Science-Grades-6-8-Curriculum](http://curriculum.tusd1.org/Subject-Areas/Science/Science-Grades-6-8-Curriculum)

**Sonoran Desert Species Game**
### Reading Focus: Literature

**Writing Focus:** Argumentative

### Unifying Concept: Earth and Space Science

**Earth History**

#### Enduring Understandings:

The goal of science is to understand the natural world. Students must learn to use scientific practices and accumulated knowledge to better understand the world around them. Earth is a geologically active planet. Huge amounts of energy are always acting on the surface of the Earth and in its interior. Observable evidence in the present gives information about processes and events that occurred in the past.

<table>
<thead>
<tr>
<th>Essential Questions:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Why does the surface of the Earth change?</td>
</tr>
<tr>
<td>• How can we demonstrate that Earth is a geologically active planet?</td>
</tr>
<tr>
<td>• How do different sources of energy act on the Earth?</td>
</tr>
<tr>
<td>• How do the Earth’s different systems/processes interact?</td>
</tr>
<tr>
<td>• How does what we see today tell us about the Earth’s past?</td>
</tr>
</tbody>
</table>

#### Academic Vocabulary:

- Classify
- Properties
- Grain
- Texture
- Crust
- Mantle
- Core
- Erosion
- Deposition
- Plate tectonics
- Lithospheric plates
- Continental drift
- Convergent
- Divergent
- Fault
- Earthquake
- Volcano
- Rift valley
- Pangaea
- Rock
- Mineral
- Igneous
- Metamorphic
- Sedimentary
- Fossil
- Fossil record
- Geologic time
- Geologist
- Sediment
- Rock cycle
- Convection current
- Fault
- Transform
- Strike-slip
- Earthquake
- Seismic wave
- Epicenter
- Volcano
- Pangaea
- Rock
- Mineral
- Igneous
- Metamorphic
- Sedimentary
- Fossil
- Fossil record
- Geologic time
- Geologist
- Sediment

### 2004 AZ Standards

#### Highly-Leveraged Standards

**Strand 6: Earth and Space Science (HLS – 20%)**

**7.S6.C1 Structure of the Earth:** Describe the composition and interactions between the structure of the Earth and its atmosphere.

**PO1.** Classify rocks and minerals by the following observable properties:

- Grain
- Color
- Texture

#### Supporting Standards

**Strand 2: History and Nature of Science**

**7.S2.C1 History of Science as a Human Endeavor:** Identify individual, cultural and technological contributions to scientific knowledge.

**PO1.** Identify how diverse people and/or cultures, past and present, have made important contributions to scientific innovations (e.g., Rachel Carson [scientist], supports Strand 4; Luis Alvarez [scientist] and Walter Alvarez [scientist], supports Strand 6; Percival Lowell [scientist], supports Strand 6; Copernicus [scientist], supports Strand 6).
### PO2. Describe how the properties and the composition of the following major layers of the Earth:
- Crust
- Mantle
- Core

### PO3. Explain the processes involved in the formation of the Earth’s structure:
- Erosion
- Deposition
- Plate tectonics
- Volcanism

### PO4. Describe how the rock and fossil record show that environmental conditions have changed over geological and recent times.

**7.56.C2 Earth’s Processes and Systems:** Understand the processes acting on the Earth and their interaction with the Earth system.

### PO1. Explain the rock cycle.

### PO2. Distinguish the components and characteristics of the rock cycle for the following types of rocks:
- Igneous
- Metamorphic
- Sedimentary

### PO3. Analyze the evidence that lithospheric plate movements occur.

### PO4. Explain lithospheric plate movement as a result of convection.

### PO5. Relate plate boundary movements to their resulting landforms, including:
- Mountains
- Faults
- Rift valleys
- Trenches
- Volcanoes

---

**PO2.** Describe how a major milestone in science or technology has revolutionized the thinking of the time (e.g., global positioning system, telescopes, seismographs, photography).

**PO3.** Analyze the impact of a major scientific development occurring within the past decade.

**PO4.** Analyze the use of technology in science-related careers.

**Strand 3: Science in Personal and Social Perspectives**

**7.53.C1 Changes in Environment:** Describe the interactions between human populations, natural hazards, and the environment.

**PO1.** Analyze environmental risks (e.g., pollution, destruction of habitat) caused by human interaction with biological or geological systems.

**PO2.** Analyze environmental benefits of the following human interactions with biological or geological systems:
- Reforestation
- Habitat restoration
- Construction of dams

**PO3.** Propose possible solutions to address the environmental risks in biological and geological systems.
### 7.S1.C1 Observations, Questions, and Hypotheses:
Formulate predictions, questions, or hypotheses based on observations.

**PO1.** Formulate questions based on observations that lead to the development of a hypothesis.

**PO2.** Select appropriate resources for background information related to a question, for use in the design of a controlled investigation.

**PO3.** Explain the role of a hypothesis in a scientific inquiry.

Design and conduct controlled investigations.

**PO1.** Demonstrate safe behavior and appropriate procedures (e.g., use and care of technology, materials, organisms) in all science inquiry.

**PO2.** Design an investigation to test individual variables using scientific processes.

**PO3.** Conduct a controlled investigation, utilizing multiple traits, to test a hypothesis using scientific processes.

**PO4.** Perform measurements using appropriate scientific tools (e.g., balances, microscopes, probes, micrometers).

**PO5.** Keep a record of observations, notes, sketches, questions, and ideas using tools such as written and/or computer logs.

### 7.S1.C3 Analysis and Conclusions:
Analyze and interpret data to explain correlations and results; formulate new questions.

**PO1.** Analyze data obtained in a scientific investigation to identify trends.

**PO2.** Form a logical argument about a correlation between variables or sequence of events (e.g., construct a cause-and-effect chain that explains a sequence of events).

**PO3.** Analyze results of data collection in order to accept or reject the hypothesis.

**PO4.** Determine validity and reliability of results of an investigation.

**PO5.** Formulate a conclusion based on data analysis.

**PO6.** Refine hypotheses based on results from investigations.

**PO7.** Formulate new questions based on the results of a previous investigation.

### 7.S1.C4 Communication:
Communicate Results of Investigations.

**PO1.** Choose an appropriate graphic representation for collected data:
- Line graph
- Double bar graph
- Stem and leaf plot
- Histogram
2019-2020 Science Curriculum Map, Grade 7

PO2. Display data collected from a controlled investigation.
PO3. Communicate the results of an investigation with appropriate use of qualitative and quantitative information.
PO4. Write clear, step-by-step instructions for following procedures (without the use of personal pronouns).
PO5. Communicate the results and conclusion of the investigation.

Strand 2: History and Nature of Science
7.S2.C2 Nature of Scientific Knowledge: Understand how science is a process for generating knowledge.
PO1. Describe how science is an ongoing process that changes in response to new information and discoveries.
PO2. Describe how scientific knowledge is subjected to change as a new information and/or technology challenges prevailing theories.
PO3. Apply the following scientific processes to other problem solving or decision making situations:
  - Observing
  - Questioning
  - Communicating
  - Comparing
  - Measuring
  - Classifying
  - Predicting
  - Organizing data
  - Inferring
  - Generating hypotheses
  - Identifying variables

Strand 3: Science in Personal and Social Perspectives
7.S3.C2 Science and Technology in Society: Develop viable solutions to a need or problem.
PO1. Propose viable methods of responding to an identified need or problem.
PO2. Compare possible solutions to best address an identified need or problem.
PO3. Design and construct a solution to an identified need or problem using simple classroom materials.
PO4. Describe a scientific discovery that influences technology.

The goal of science is to understand the natural world. Students must learn to use scientific practices and accumulated knowledge to better understand the world around them. The Earth, Moon, and Sun interact in ways that affect our planet in fundamental ways. The relative positions of the Sun, Moon, and Earth create patterns observed in the phases, eclipses, tides, and seasons. The Earth is just one planet in our Solar System, in our galaxy, filled with billions of stars, in a universe filled with billions of other galaxies. A constellation is a region of the sky that appears to contain a pattern of stars.

**Enduring Understandings:**
- How is the universe organized?
- In what ways is a solar system organized?
- Why do we see differences in the appearance and movements of the Sun and Moon from Earth?
- In what ways do the Earth, Sun, and Moon affect each other?
- How does the force of gravity affect all matter in the universe?
- How do stars appear to make patterns in the sky?

**Essential Questions:**
- How is the universe organized?
- In what ways is a solar system organized?
- Why do we see differences in the appearance and movements of the Sun and Moon from Earth?
- In what ways do the Earth, Sun, and Moon affect each other?
- How does the force of gravity affect all matter in the universe?
- How do stars appear to make patterns in the sky?

**Academic Vocabulary:**

### 2004 AZ Standards

#### Highly-Leveraged Standards

**Strand 6: Earth and Space Science (HLS – 20%)**

- **7.S6.C3 Earth in the Solar System:** Understand the relationships of the Earth and other objects in the solar system.
  - **PO1.** Explain the phases of the Moon in terms of the relative positions of the Earth, Sun, and Moon.
  - **PO2.** Construct a model for the relative positions of the Earth, Sun, and Moon as they relate to corresponding eclipses.
  - **PO3.** Explain the interrelationship between the Earth’s tides and the Moon.
  - **PO4.** Explain the seasons in the Northern and Southern Hemispheres in terms of the tilt of the Earth’s axis relative to the Earth’s revolution around the Sun.
  - **PO5.** Identify the following major constellations visible (seasonally) from the Northern Hemisphere:
    - Orion
    - Ursa Major (Great Bear)
    - Cygnus
    - Scorpius
    - Cassiopeia

#### Supporting Standards

**Strand 2: History and Nature of Science**

- **7.S2.C1 History of Science as a Human Endeavor:** Identify individual, cultural and technological contributions to scientific knowledge.
  - **PO1.** Identify how diverse people and/or cultures, past and present, have made important contributions to scientific innovations (e.g., Rachel Carson [scientist], supports Strand 4; Luis Alvarez [scientist] and Walter Alvarez [scientist], supports Strand 6; Percival Lowell [scientist], supports Strand 6; Copernicus [scientist], supports Strand 6).
  - **PO2.** Describe how a major milestone in science or technology has revolutionized the thinking of the time (e.g., global positioning system, telescopes, seismographs, photography).
  - **PO3.** Analyze the impact of a major scientific development occurring within the past decade.
  - **PO4.** Analyze the

</table>
PO3. Communicate the results of an investigation with appropriate use of qualitative and quantitative information.
PO4. Write clear, step-by-step instructions for following procedures (without the use of personal pronouns).
PO5. Communicate the results and conclusion of the investigation.

Strand 2: History and Nature of Science
7.S2.C2 Nature of Scientific Knowledge: Understand how science is a process for generating knowledge.
PO1. Describe how science is an ongoing process that changes in response to new information and discoveries.
PO2. Describe how scientific knowledge is subjected to change as a new information and/or technology challenges prevailing theories.
PO3. Apply the following scientific processes to other problem solving or decision making situations:
- Observing
- Questioning
- Communicating
- Comparing
- Measuring
- Classifying
- Predicting
- Organizing data
- Inferring
- Generating hypotheses
- Identifying variables

Strand 3: Science in Personal and Social Perspectives
7.S3.C1 Changes in Environment: Describe the interactions between human populations, natural hazards, and the environment.
PO1. Analyze environmental risks (e.g., pollution, destruction of habitat) caused by human interaction with biological or geological systems.
PO2. Analyze environmental benefits of the following human interactions with biological or geological systems:
- Reforestation
- Habitat restoration
- Construction of dams
PO3. Propose possible solutions to address the environmental risks in biological and geological systems.

7.S3.C2 Science and Technology in Society: Develop viable solutions to a need or problem.
PO1. Propose viable methods of responding to an identified need or problem.
PO2. Compare possible solutions to best address an identified need or problem.
PO3. Design and construct a solution to an identified need or problem using simple classroom materials.
PO4. Describe a scientific discovery that influences technology.

This quarter is an enrichment and enhancement quarter to engage your students in Inquiry based projects. You may choose to use this time to extend material from previous quarters or provide Inquiry based, learning opportunities for your students. Quarter 4 Map provides optional resources for enrichment activities.

</table>

**Enduring Understandings:**
The goal of science is to understand the natural world. Students must learn to use scientific practices and accumulated knowledge to better understand the world around them.

**Essential Questions:**
How do you use the Inquiry Process to understand the world around you?

**Academic Vocabulary:**
Observing
Questioning
Communicating
Comparing
Measuring
Classifying
Predicting
Organizing data
Inferring
Generating hypotheses
Identifying variables

### 2004 AZ Standards

#### Highly-Leveraged Standards

**Strand 1: Inquiry Process**

**7.S1.C1 Observations, Questions, and Hypotheses:** Formulate predictions, questions, or hypotheses based on observations.

**PO1.** Formulate questions based on observations that lead to the development of a hypothesis.

**PO2.** Select appropriate resources for background information related to a question, for use in the design of a controlled investigation.

**PO3.** Explain the role of a hypothesis in a scientific inquiry.

**PO1.** Demonstrate safe behavior and appropriate procedures (e.g., use and care of technology, materials, organisms) in all science inquiry.

**PO2.** Design an investigation to test individual variables using scientific processes.

**PO3.** Conduct a controlled investigation, utilizing multiple traits, to test a hypothesis using scientific processes.

#### Supporting Standards

**Strand 6: Earth and Space Science (HLS – 20%)**

**7.S6.C1 Structure of the Earth:** Describe the composition and interactions between the structure of the Earth and its atmosphere.

**PO1.** Classify rocks and minerals by the following observable properties:
- Grain
- Color
- Texture
- Hardness

**PO2.** Describe the properties and the composition of the following major layers of the Earth:
- Crust
- Mantle
- Core

**PO3.** Explain the following processes involved in the formation of the Earth’s structure:
- Erosion
PO4. Perform measurements using appropriate scientific tools (e.g., balances, microscopes, probes, micrometers).
PO5. Keep a record of observations, notes, sketches, questions, and ideas using tools such as written and/or computer logs.

7S1.C3 Analysis and Conclusions: Analyze and interpret data to explain correlations and results; formulate new questions.
PO1. Analyze data obtained in a scientific investigation to identify trends.
PO2. Form a logical argument about a correlation between variables or sequence of events (e.g., construct a cause-and-effect chain that explains a sequence of events).
PO3. Analyze results of data collection in order to accept or reject the hypothesis.
PO4. Determine validity and reliability of results of an investigation.
PO5. Formulate a conclusion based on data analysis.
PO6. Refine hypotheses based on results from investigations.
PO7. Formulate new questions based on the results of a previous investigation.

7S1.C4 Communication: Communicate Results of Investigations.
PO1. Choose an appropriate graphic representation for collected data:
- Line graph
- Double bar graph
- Stem and leaf plot
- Histogram
PO2. Display data collected from a controlled investigation.
PO3. Communicate the results of an investigation with appropriate use of qualitative and quantitative information.
PO4. Write clear, step-by-step instructions for following procedures (without the use of personal pronouns).
PO5. Communicate the results and conclusion of the investigation.

- Deposition
- Plate tectonics
- Volcanism
PO4. Describe how the rock and fossil record show that environmental conditions have changed over geological and recent times.

7S6.C2 Earth’s Processes and Systems: Understand the processes acting on the Earth and their interaction with the Earth system.
PO1. Explain the rock cycle.
PO2. Distinguish the components and characteristics of the rock cycle for the following types of rocks:
- Igneous
- Metamorphic
- Sedimentary
PO3. Analyze the evidence that lithospheric plate movements occur.
PO4. Explain lithospheric plate movement as a result of convection.
PO5. Relate plate boundary movements to their resulting landforms, including:
- Mountains
- Faults
- Rift valleys
- Trenches
- Volcanoes
PO6. Describe how earthquakes are measured.

Strand 6: Earth and Space Science (HLS – 20%)
7S6.C3 Earth in the Solar System: Understand the relationships of the Earth and other objects in the solar system.
PO1. Explain the phases of the Moon in terms of the relative positions of the Earth, Sun, and Moon.
PO2. Construct a model for the relative positions of the Earth, Sun, and Moon as they relate to corresponding eclipses.
PO3. Explain the interrelationship between the Earth’s tides and the Moon.
PO4. Explain the seasons in the Northern and Southern Hemispheres in terms of the tilt of the Earth’s axis relative to the Earth’s revolution around the Sun.
PO5. Identify the following major constellations visible (seasonally) from the Northern Hemisphere:
- Orion
2019-2020 Science Curriculum Map, Grade 7

- Ursa Major (Great Bear)
- Cygnus
- Scorpius
- Cassiopeia

PO6. Explain the relationship among common objects in the solar system, galaxy, and the universe. Strand 4: Life Science (HLS – 14%)

PO1. Compare food chains in a specified ecosystem and their corresponding food web.

PO2. Explain how organisms obtain and use resources to develop and thrive in:
  - Niches
  - Predator/prey relationships

PO3. Analyze the interactions of living organisms with their ecosystems:
  - Limiting factors
  - Carrying capacity

PO4. Evaluate data related to problems associated with population growth (e.g., overgrazing, forest management, invasion of non-native species) and the possible solutions.

PO5. Predict how environmental factors (e.g., floods, droughts, temperature changes) affect survival rates in living organisms.

PO6. Create a model of the interactions of living organisms within an ecosystem.

Constant Standards

Strand 2: History and Nature of Science

7.S2.C1 History of Science as a Human Endeavor: Identify individual, cultural and technological contributions to scientific knowledge.

PO1. Identify how diverse people and/or cultures, past and present, have made important contributions to scientific innovations (e.g., Rachel Carson [scientist], supports Strand 4; Luis Alvarez [scientist] and Walter Alvarez [scientist], supports Strand 6; Percival Lowell [scientist], supports Strand 6; Copernicus [scientist], supports Strand 6).

PO2. Describe how a major milestone in science or technology has revolutionized the thinking of the time (e.g., global positioning system, telescopes, seismographs, photography).

PO3. Analyze the impact of a major scientific development occurring within the past decade.

PO4. Analyze the use of technology in science-related careers.

7.S2.C2 Nature of Scientific Knowledge: Understand how science is a process for generating knowledge.

PO1. Describe how science is an ongoing process that changes in response to new information and discoveries.

PO2. Describe how scientific knowledge is subjected to change as a new information and/or technology challenges prevailing theories.
2019-2020 Science Curriculum Map, Grade 7

PO3. Apply the following scientific processes to other problem solving or decision making situations:
- Observing
- Questioning
- Communicating
- Comparing
- Measuring
- Classifying
- Predicting
- Organizing data
- Inferring
- Generating hypotheses
- Identifying variables

Strand 3: Science in Personal and Social Perspectives
7.S3.C1 Changes in Environment: Describe the interactions between human populations, natural hazards, and the environment.
PO1. Analyze environmental risks (e.g., pollution, destruction of habitat) caused by human interaction with biological or geological systems.
PO2. Analyze environmental benefits of the following human interactions with biological or geological systems:
- Reforestation
- Habitat restoration
- Construction of dams
PO3. Propose possible solutions to address the environmental risks in biological and geological systems.

7-S3-C2 Science and Technology in Society: Develop viable solutions to a need or problem.
PO1. Propose viable methods of responding to an identified need or problem.
PO2. Compare possible solutions to best address an identified need or problem.
PO3. Design and construct a solution to an identified need or problem using simple classroom materials.
PO4. Describe a scientific discovery that influences technology.

### Instructional Resources

#### Ecology Enrichment
- Invasive Species in the Sonoran Desert Region Research Project/Presentation (Desert Museum INVADERS) [http://www.mpsaz.org/franklinjr/staff/aaabd_elhaq/science_links/files/invasive_species_in_the_sonoran_desert_region.pdf](http://www.mpsaz.org/franklinjr/staff/aaabd_elhaq/science_links/files/invasive_species_in_the_sonoran_desert_region.pdf)

#### Earth History Enrichment
- Lava Layering pg 4 [https://mars.nasa.gov/classroom/pdfs/MSIP-MarsActivities.pdf](https://mars.nasa.gov/classroom/pdfs/MSIP-MarsActivities.pdf)
- ABC Geology book, blog, prezi, or Poster - for each letter of the alphabet student provides name, description, and picture of something related to Geology
- The Day the Earth Shook [http://www.pbs.org/wgbh/nova/education/activities/2302_shook.html#materials](http://www.pbs.org/wgbh/nova/education/activities/2302_shook.html#materials)

#### Astronomy Enrichment
- Project Spectra: [http://lasp.colorado.edu/home/education/k-12/project-spectra/](http://lasp.colorado.edu/home/education/k-12/project-spectra/)
### Instructional and Assessment Guides

**Culturally Responsive Practices** ([TUSD SPARKS, SPARKS Strategies](#))

**Kahoot!** – An online quiz game where you can either create your own or find related user created topics. It provides immediate feedback on student/class understanding. Requires free account creation.

**AAAS Science Assessment** (create free tests)

**Pre/Post Unit Assessment:** [http://intranet/science/Kit_Asmts.html](http://intranet/science/Kit_Asmts.html)

**Formative/Performance Assessment Examples**

- Complete a lab report that includes question, hypothesis, variables, procedure, table, graph, and conclusion.
- Write an original procedure to conduct a controlled experiment.
- Identify the parts of the scientific process.
- [Lab Safety Test](#)
- [PALS](#) (examples of performance assessments)
- [Google doc – Formative assessment examples](#)
