Fabrics
Big Idea: Fabrics have identifiable characteristics and interact with other materials.
Fabric All Around
Fabric Interactions
Different kinds of fabric have identifiable characteristics that set them apart from each others.
Fabric is used for many things in our daily lives.
Many fabrics are made by weaving threads together using an over-under, alternating pattern.
More than one piece of fabric can be joined together using a needle and thread, through the process of sewing.
Some fabrics absorb water, and others repel water.
Different properties of fabrics make them useful for different purposes.
Fabric that has been soiled can be cleaned by washing it.
Cleaning fabric is more successful when detergent and a scrub brush are used.
Fabric can be permanently dyed a wide variety of colors.
